PHILE INA MOI Commercial Adbertiser.

he has observed its slow increase from time to time, and, in his estimate, it represents so many NATURDAY, MAY 22, years of practical labor. His ideas of life are From Ocean to Ocean. shaped by his own experience. The natural effects of carning the first thousand The next Congress will be called upon to condollars we hold to be very large benefits. They aider a proposition to townest the Atlantic and Pacific Oceans by means of a smal. The project are just the qualities of mind and body which are likely to accure business success in after has been under consideration for the last half years. They constitute the best practical educa-

century, for beyond a general and pretty thortion which man can have so a worker in this ough examination of country through which the canal must pass, nothing has been done. Several working world. They are gained in season for life's purpose-at the opening period, just when they are wanted-when foolish notions are most routes have been proposed and surveyed. At different points between Mexico and Colombia likely to mislead an inexperienced brain; and when, the grean on each side invades the above line as too, there is a fail opportunity for an expansion if in a determined effort to mingle waters, but at and development in later years. Men have but all these points a massive wall of rock rises up one life to five, and hence they start from opening as if to my, "Thus far, and no farther." By manhood but once; and the manner in which general admission of English and American they start, the purpose which they have in view engineers, the choice of routes is now reduced to and the habits which they form will ordinarily determine the sequel of their career on earth. three-the Nicaragua, the Panema, and the Darien. The Nicaragua is the northern route. To succeed, men must have the elements of It has been carefully surreyed and found femilie success with themselves. One great reason why The Lake of Nicaragua lies about twenty miles there are so many uscless, inefficient and povertyinward from the Pacific shore, and is nearly one stricken men on earth-or rather boys seeming to hundred miles in length. From the eastern exbe men-consists in the fact that they did not tremity to the Caribbean sea is upward of a start right. A prominent reason why the chilhundred miles, making the whole route about dren of the rich so frequently amount to nothing two hundred and fifty miles in length. The obmay be found in the luxury, case and indolence pertions to this route are its length, as compared which marks the commencement of their lives. with the others, and the absence of good harbors It is the law of God that we should be workers on either coast. There are no engineering diffion earth; and no one so well consults the best culties that cannot be overcome. The cost is

The next route going south is the Panama. The total length is forty-eight miles, of which is about 1,200 feet, touching the Pacific Ocean ten miles north of Panama. The advantages urged in favor of this route are its comparative shortness, being only one-fifth of the Nicaragua, good harbors on each coast, and cheapness of the outting. The proximity of the Panama Railroad s also in its favor. On the other hand, the River Chagres is a treacherous stream, subject to rain torrents which sometimes fill its bed with sand. The natives my that the pelican in flying not be the great concourse of pilgrims who in from ocean to ocean always goes by the Chagres route, from which it is argued that it is the lowest point between the two oceans.

variously estimated at \$35,000,000 to \$40,000,-

now engaged in making a decisive survey of this

that all may enjoy the indulgences proclaimed without leaving their own country. The first The third and most southern route under consideration is the Darien, otherwise known as the festival of this kind that we have any account of Atrata Napipi route. It was followed by the was in the year 1300, during the pontificate of Spanish buccaneers two centuries ago, and the Boniface Eighth. It owes its origin to a traditrails they cut are still visible. The route crosses tion in the church that once every hundred years a healthful country and the barbors on each ocean the early Christians thronged to Rome to visit are good. But the Cordilleras present a seem- the basilies of St. Peter's, thereby obtaining full ingly unsurmountable obstacle. The distance is pardon for all their sins. The ceremonies accomonly twenty-eight miles, but the height of the panying this first holy year were magnificent in mountain range forbids cutting a channel down the extreme, and the number of pilgrims not less through them. The objections to a series of locks than two millions; so great were the throng that are so great as to leave that method out of the many lost their lives, either sufficiated or trodden question. It has been proposed, however, to cut under foot. At the altar of St. Peter's were a tunnel through the solid rock a distance of offered not less than 50,000 gold florins, and as three miles, large enough to permit an ocean many pieces of copper money, to gather in which steamer to pass through it. It is said that Com-scarcely sufficed two attendants stationed there mander Selfridge is carnestly in favor of the night and day. Although at the institution of

Darien route and the tunnel project.

The ocean-to-ocean canal interests Europe and bad been fixed once every century, still the next the Atlantic States perhaps more than it does one was observed in 1350, under Clement VI., the people of this coast. A line of steamers between Oriental ports and San Francisco, thence benefit for Christendom. After this the same by railroad East is the method most likely to varied until it was finally settled at every twentynduce to our prosperity. This system will centre the commerce of the East in San Francisco. lingham & Un. I am prepared to fill City and Country Orders | A line of clipper ships from New York or Boston direct to China and Japan, by way of Cape Horn, would not come within thousands of miles of this port; but a line would only compete with the overland route in certain classes of goods. But a canal from the Atlantic to the Pacific, through any of the routes described, would save not only the peril and discomfort of a Cape Horn voyage, but several thousands of miles in travel and many days in time. The canal would pass along nearly at ten degrees north of the equator, while ships pass the Hern at about sixty south latitude. The advantage in point of time over the Cape Horn route, and in point of expense over the everland route, would draw the bulk of the trade between the Atlantic cities and Asia to the canal route. It is a question, however, now that the Suca Canal is completed, if a canal across Nicaragua or Darien would be of much use to England or France. The inconvenience and expense of unleading and leading twice by the Isthmus route, and six times as now required by the overland route, would be avoided by the canal route. It is probable that this canal project will receive the serious consideration of the with the period being granted to all Catholics

> The Gold Fish Trick-How a Necromancer Came to Grief.

next Congress .- S. F. Bulletin.

During the last sixty days nearly twelve thousand emigrants have arrived in this State, and the cry is, Max Adeler relates the following still they come. On Thursday last no less than twenty-five car loads of emigrants arrived at Sacra-Several of the magicians who perform in publie do what they call the "gold fish trick." The mento, and on Friday (yesterday) nine more car loads arrived. The great majority of these are probjugler stands upon the stage, throws a handkerably persons of small means. A Sacramento conchief over his extended arm, and produces in suctemporary says that they appeared to be almost cession three or four shallow dishes, filled to the exclusively people to hard work, and adds : brim with water, in which are gold fish swimming. Of course the dishes are concealed somebow upon were going or what they would do when they got to

the person of the performer. Peter Lamb, the young fellow who lives near me, discovered how the trick was done, and be offered to do it the other night, at Magrader's party, for the entertainment of the company. So the folks gathered in one end of the parky, and

other end. He said: "Ladies and goutlemen, you will perceive that I have nothing about me except my ordinary olothing and yet I shall produce presently two dishes filled with water and living fish. Please

watch me narrowly. Then Peter thing the handkerchief over his hand and arm, and we could see that be was working his way vigorously at something beneath it. He continued for some moments, and still the goldfish did not appear. Then he began to grow very red in the face, and we saw that scorething was the matter. Then the perspiration began to stand on Peter's forebead, and Mrs. Magrador asked him if he was well. Then the company laughed, and the magician grew redder. But he kept on Simbling beneath the handkerchief, and apparently trying to reach around his contrails. Then we heard something snap, and the next

moment a quart of water ran down the the wisand's lost log and spread over the carpet. By this time he looked as if the grave would be a wolvener reliege. But still be continued to feel around under the handkerohief. At last another some was heard, and one more quart of want planged down his right log and formed a pool about his shos. Then the perconancer hurriedly and that the experiment had somehow failed and be daried into the disingercom. I followed and wanted in every pursuit. The Year of Jubilee.

year 1875 has been proclaimed the holy year or year of jubilee, the recurrence of which is fixed

at once every twenty-five years. But the mag-

nficent ceremonies which formerly ushered in and

accompanied this period will be dispensed with

this year, on account of the self-imposed impris-

onment of the Pope, with which great festivities

would be incompatible. Consequently there will

former times flocked to Rome to assist at the

ceremonies, especially as Pius IX has declared

five years, at which period it now remains. Alex-

ander VI. finding that this festival, had of late

been somewhat neglected, determined to spare no

expense of preparation to bring it back to its

original splender. For two years beforehand, the jubilee of 1500 was published in every coun-

try, and this Pope it was who first instituted the

ceremony of the opening of the sacred doors of

the four principal basilicas, which solemnity

ushers in the year. The Pope himself with a

hammer struck several times on the door of St.

Peter's and then entered into the basilica amid

solemn chanting, accompanied by all his court and prelates. The French revolution gave a

severe blow to this festival, and neither Pius VI.

in 1824, Leo XII., successor to Pius VII., pro-

claimed, amid the firing of cannon and the sound

of trumpets and drums, the revival of the old

custom, but with little success. In 1850 the

absence of the Pope interfered with the observ-

ance of the festivities, although on his return

from exile be issued an encyclical for its celebra-

tion. This year the sacred doors will not be

opened, nor will any particular inducements be

The Emigration Problem.

Few of them were well informed as to where they

the end of their journey. Although it was a frequent

observation with them, "If we've got to starve we'd

rather it be in a warm country," it was evident that great things were expected from the "land of gold."

Half a dozen of the new-comers were offered \$75

per month each to work at or near Truckee, but the

wanted to go on to San Francisco and as far south-

of remartic ideas concerning California, and appar-

ently expected to find \$20 pieces growing in the

a proportion of the incoming emigration to "go as

far southward as possible " will not result profitably

either for the emigrants themselves or for the partic-

nlar localities to which they are bound. The re-

sources and attractions of the southern counties of

California are very great. But when emigrants are

arriving at the rate of something like 10,000 per

month, and when but a comparatively small per

centage of them procure work immediately, or pos-

Honce the importance of practical action with

stream to that section.

were they to come forward.

who comply with the prescribed regulations.

According to an encyclical of the Pope, the

Dr. J. G. Holland, in Scribner's Magazine for September has arraigned what he pleases to style "the lower classes of Americans" for incivility. He charges that among the workingmen of the nation politeness is little known and less produced; that the marketman halls his well-dressed customer as "Bors," and that the courteous greeting of "Sir" and Madam," the civil answer and the deportment which indicates good members are waiting. The American, says Dr. Holland, is a kinder man than the Franchisen and better natured than the Evglishman, but less polite than either; and the Doctor thinks that the "birs mousieur" and the "birs modume " of Paris are superior to the American's rough response of " All right, Boss." Had we been saked before reading the article as to which are the most police people in the world, we abould have answered, the American; than the American-born workingman there are none more conrecous. Political equality most certainly and naturally breeds reciprocal respect among all classes Political equality begets self-respect, and self-respect is the true basis of consideration for others. True politeness results from that innate breeding which makes a man take pride in his own actions. We assert that it is a most rare thing for a gentleman or lady to be rudely treated in a shop, market or public place by tradesman, servant or laborer in the United States. The familiarity that salutes with slang expression is not a peculiarity of the American, and is seldom if ever indulged in unless invited by undignified conduct upon the part of the person thus familiarly addressed. The mechanic who styles the stranger "Boss" may do it neither offensively nor rudely; the one under whom he has learned his trade is styled " Boss," hence the term is one of honor and not reproach. The sailor who hails one as "Captain," or the countryman who salutes a stranger as "Squire," may be ignorant development of his being as when he conforms of foreign manners, and, unlike the Englishman, his practice to this law. The workers in some neglects to preface his remarks with, "Beg pardon, suitable sphere are the only really strong men in this world.

The workers in some neglects to preface his remarks with, beg parted, sir," or with the French word "Pardon," but he gives the stranger what is to him an honorable title. The best and truest politeness is a manifestation of the respect due to women; and we assert, without fear of contradiction, that there is no other country in the world where females receive such respectful consideration as is accorded to them in the United States. A lady may travel from New York to San Francisco unattended, and if she will maintain the dignity and reserve of her sex she may make the ourney a hundred times without insult or personal annoyance; and if from some intoxicated person or some exceptional individual she should receive an insult, she may confidently appeal to the first American she meets for protection, and she will be sure to have

> who would not fight in her defense .- S. F. Chronicle. WONDERS OF CHEMISTRY .- An Eastern exchange contains the following extract from the first of a series of lectures by Prof. Ogden Doremus, on the "Agreement between the Mosaic and Scientific accounts of creation," delivered in New York City: The lecturer began his course by comparing the chaos of science with the chaos described in Genesis, and held that the form of the earth is a demonstration that it was once a fluid mass. He then showed that by the action of heat solids may be converted into liquids or gasses, that the gascous state is the most chaotic, and that if originally gaseous, the imponderable forces must have been latent. His experiments, conducted by means of most elaborate machinery, were exceedingly interesting, especially those by which he sought to show how liquids take the globular form when supported against the force of gravity, and those in illustration of the peculiar nature and properties of the gasses. He converted laughing-gas into solid ice, changed carbonic acid gas into snow, congealed water in a red hot dish, rendered ten pounds of mercury solid by bringing it in contact with solidified gas, and performed a number of other experiments equally curious and interesting, to the great delight of his appreciative audience. In closing his lecture, Prof. Doremus claimed that the scriptural account of the creation was in no wise opposed by science, that on the contrary the two accounts were demonstrably the same.

it promptly accorded; there is not an American-born

baggage-smasher, hotel runner, coachman or servant

A FREE HORSE AT REST .- During the pioneer days of Ionia, the town had an editor who was patient and long-suffering. Some of the members of the church got him to give twenty dollars towards securing a minister; then they wanted nor Pius VII. could recall it to life. However, five dollars for the heathen; then they wanted their religious notices inserted free; then he was asked for twenty-five dollars toward helping to build a parsonage, and he finally found that he was giving the church more than he gave his family. He nevertheless " hung on " for a time longer, or until one evening he went to prayer meeting, and was asked to leave his office for a week and go and help clear the grounds for a campmeeting. That was the last straw, and he rose offered to resort to Kome, the privileges connected

"Gentlemen, I'd like to go to heaven along with you. I know you all. You are clever and obliging, and kind and tender, and it would be nice for us all as a congregation to go in together, but I've concluded to leave and dodge in along with somebody from Detroit, Lapeer or Grand Rapids. It's money, money, all the time, and I've given this church until, if my wife should die, she'd have to go to heaven barefooted."

The congregation seemed to realize that a free horse was being rode to death. They let up on the editor and pacified him. He even had a special tent assigned him at the camp meeting and all was well.

PATCHES IN THE WRONG PLACE .- One of Boston's best-known merchants noted for his shrewdness and penetration, had a test case presented a short time since and came off victorious. As it is an illustration of this millionaire's penetration in a few moments Lamb entered the door at the offer was declined, the parties intimating that they in great business affairs, we give the story here. It appears that the merchant wanted another ward as possible. Several of the emigrants were full gardener upon his country estate near Boston, and an individual presented himself for the office. "Understand the business?"

> "Yes, been in it for years." Whom had he lived with last? The applicant mentioned a gentleman the merchant was well acquainted with, stated that he left for no fault, but that his former employer was going to Europe, had sold his estate, and had no further use for him. "What wages do you expect?" " Eighteen dollars a month.

This was astonishingly low for such a promising kooking, soher man, and the shrewd business sess the capital necessary to purchase land and wait man rubbed his chin thoughtfully and reflected until they can make it productive, it is by no means—that it was a bargain lot; but "wasn't there some-desirable that they should rush in one continuous—thing wrong about it?" His habitual business caution even in this comparatively trifling negotiation did not forsake him. "Call to-morrow at this time, and I will have | | 100 KN. seen Mr. --- , your former employer, and will

give you an answer. The gardener turned and began to walk slowly away, and as he did so he displayed two patches on the seat of his pantalisons beneath the line of his roundabout moket. "Hallo" here bome back here," called the

merchant: "You needs't apply to-morrow: I see The astonished applicant stammered out someand the Big Blue, at Kernville, alone would not be thing about the knowledge of gardening and good long in finding employment for a thousand men, character, but was out off short by this practical
